**A** Have your RNA samples been prepared by a method that preserves low molecular weight RNAs?
ORB recommends standard Trizol-based purification modified to include an overnight precipitation at -20C

**B** Have all RNA samples been DNase Digested and subsequently purified to remove DNase?
Warning: Some DNasing protocols may interfere with labeling or cause loss of microRNA from the samples.
Contact ORB for discussion if you have DNase-treated your samples.
**ORB provides DNase Digestion in our process at no extra charge.**

**C** Are all RNA samples at 50 ng/ul or above?
If answer is "No" to above, a $30 per sample fee will be charged for pre-concentration.

**D** Have you provides >=4 micrograms of total RNA for each sample?
